PROFESSIONAL SUMMARY

Senior Software Architect, Frontend Architect, and Full-Stack Engineer with 20+ years of experience designing, modernizing, and scaling enterprise software systems across telecom, SaaS, BI/CRM, and industrial platforms. Strong background in React, Angular, TypeScript, NestJS, Node.js, Python, .NET, SQL Server, PostgreSQL, and microservice-based systems.

Led architecture and frontend engineering efforts for the Mylrancell Super App serving 40M+ users and 5M+ daily active users. Experienced in building modular systems, improving engineering standards, modernizing legacy platforms, and mentoring distributed engineering teams.

Hands-on experience collaborating with cloud-native and DevOps environments using Docker, Kubernetes, CI/CD pipelines, GitLab CI, and distributed deployment workflows. Focused on scalable architecture, maintainability, developer productivity, and long-term system evolution.

CORE STRENGTHS

- Software & Frontend Architecture
- React, Angular, TypeScript, RxJS, React Native
- Full-Stack Development (.NET, Node.js, NestJS, Python)
- Cloud-Native & Distributed Systems
- CI/CD, Docker, Kubernetes, GitLab CI
- Microservices & Modular Architecture
- Enterprise Systems & BI Platforms
- Team Leadership & Engineering Standards
- Performance Optimization & Scalability
- API Design, Integration & System Modernization

PROFESSIONAL EXPERIENCE

Frontend Architect (Part-time) | Parnian - Hoofer SaaS Platform | Remote | 2025 – Present

- Leading frontend modernization from Angular 11 to Angular 21 for a production SaaS platform.

- Refactored legacy frontend architecture into a modular structure, improving maintainability and accelerating feature delivery.
- Converted platform into a Progressive Web App (PWA) and delivered Android application using Trusted Web Activity (TWA).
- Improved mobile responsiveness and frontend consistency across devices.

Full-Stack Engineer (Contract) | payever.org | Remote - Hamburg, Germany | Jun 2024 – Apr 2026

- Developed and improved SaaS CMS Builder and messaging systems using Angular, NestJS, Node.js, and microservice-based architecture.
- Reduced frontend/backend coupling and improved feature delivery speed through modular refactoring.
- Worked across frontend and backend systems in a distributed international engineering environment.
- Contributed to architecture improvements increasing maintainability, extensibility, and delivery confidence.

Senior Frontend Team Lead / Software Architect | MTN Irancell | Tehran, Iran | Feb 2023 – Jun 2024

- Led and mentored a frontend team of 10+ engineers building the Mylrancell Super App serving 40M+ users and 5M+ daily active users.
- Defined frontend architecture, reusable component systems, and engineering review standards across teams.
- Collaborated with backend and DevOps teams on API contracts, caching strategies, release readiness, and production stability.
- Improved engineering consistency and delivery coordination across a large-scale telecom product organization.

Senior Frontend Developer / Team Lead | MTN Irancell | Tehran, Iran | Sep 2021 – Feb 2023

- Designed and implemented scalable React, React Native, and PWA architecture for the Mylrancell Super App.
- Built shared frontend foundations and reusable UI systems accelerating cross-platform feature delivery.
- Helped launch a cross-platform Super App within 12 months supporting large-scale mobile-first usage.

Founder & Lead Architect | Dorj IT | Mashhad, Iran | Mar 2010 – Sep 2021

- Founded and led a software company delivering BI, CRM, reporting, and enterprise platforms for industrial and energy-sector clients.
- Architected microservice-based dashboards integrating 40+ enterprise data sources including SIMA Dashboard for Tavanir.
- Designed and implemented production systems and project management platforms for refinery organizations.
- Led full-cycle software delivery including requirements analysis, architecture, backend/frontend implementation, deployment, and long-term support.

- Built enterprise systems using .NET, C#, SQL Server, JavaScript, Angular/React-era frontend stacks, and REST APIs.

Software Developer / .NET Developer | Iran | 2004 – 2010

- Developed enterprise business applications, reporting systems, and database-driven tools using .NET, SQL Server, JavaScript, and Microsoft technologies.
- Built strong foundations in backend development, database modeling, production support, and enterprise client communication.

SELECTED PROJECTS & OPEN SOURCE

- OpenSearch Dashboards: Contributed to OpenSearch Dashboards OSS project by identifying, reproducing, and fixing Discover embedded layout behavior.
- Polaris Signal: Building a TypeScript-based crypto market dashboard focused on selected assets, price zones, and signal-style insights.
- HealMeet: Full-stack TypeScript project including authentication and service-layer architecture.
- Writing: Published engineering articles about software teams, organizational fragmentation, architecture, and engineering culture.

TECHNICAL SKILLS

Frontend Architecture: React, Angular, TypeScript, RxJS, React Native, Next.js, PWA, HTML5, CSS3

Backend & APIs: NestJS, Node.js, Python, .NET, C#, REST APIs, microservices

Databases: PostgreSQL, SQL Server, MongoDB, MySQL

Cloud & DevOps: Docker, Kubernetes, GitLab CI, CI/CD pipelines, distributed deployment workflows

Architecture & Practices: Clean Architecture, system design, modular systems, API design, performance optimization, Agile/Scrum

Leadership: Technical strategy, mentoring, architecture reviews, cross-team collaboration, stakeholder communication

EDUCATION & LANGUAGES

BSc in Computer Engineering – Azad University of Central Tehran

Languages: Persian (Native), English (Professional Working Proficiency)
